PROFESSIONAL SUMMARY

Data Science and Analytics graduate who turns business requirements into clear data insights. Strong in SQL, Python, Excel and Power BI/Tableau for analysis, reporting and trend spotting. Experience gathering requirements, documenting workflows, and coordinating between business stakeholders and technical teams.

EDUCATION

B.Sc. (Computer Science - Data Science and Analytics) | (2023 – 2026)
Manikam Ramaswami College of Arts and Science
Key Subjects: Python, Machine Learning, SQL, Statistics

TECHNICAL SKILLS

Data Analysis: SQL Querying, EDA, Data Cleaning, Data Modeling, Statistical Analysis, Pandas, NumPy

Data Visualization & Reporting: Power BI, Tableau, Excel (PivotTables, VLOOKUP), Google Sheets

Databases: MySQL

Programming: Python, SQL, C, JavaScript

Machine Learning: Scikit-learn, NLP, YOLOv8, RAG, ChromaDB

Tools: Git, GitHub, Google Colab, VS Code, Figma

Web: HTML, CSS, Responsive Design

INTERNSHIP EXPERIENCE

Social Research Intern — EKTA Resource Centre for Women

- Collected stakeholder input through structured surveys and documented the findings for decision-makers.
- Analyzed field data to find gaps and issues, and wrote reports that supported safety recommendations.

Web Development Intern — V7 Lancers (2 Months)

- Worked between the client and the development team to gather and document requirements for a 13-section website.
- Spotted structure and workflow issues in the site and suggested UI changes to improve accessibility and consistency.

PROJECTS

E-commerce Sales & Delivery Analytics Dashboard | MySQL, Python, Power BI

- Analyzed the Olist e-commerce dataset (~100K orders, multiple relational tables) using SQL joins, window functions and pandas for cleaning and preparation.
- Built a Power BI dashboard with DAX measures for revenue, average order value, monthly growth and late-delivery rate.
- Studied how delivery delays affect customer review scores and turned the results into business recommendations.

Smart Parking & Predictive Allocation Platform | Python, Data Analytics

- Modeled real-time occupancy data to build an automated availability tracker and dynamic pricing logic.
- Analyzed peak-hour usage trends to improve parking spot allocation (25% improvement).

Educational Platform & Information Portal | HTML5, CSS3, UX Design

- Planned and built a 13+ module web portal covering course catalogs, event schedules and faculty directories.
- Did requirements analysis and information architecture planning to make navigation and content delivery simpler.

AI-Based Traffic Monitoring & Analytics System | YOLOv8, OCR, Python

- Classified vehicles, violation types and helmet compliance from real-time CUMTA traffic video using a YOLOv8 pipeline.
- Checked annotation accuracy across large video datasets and converted unstructured video into structured incident records for trend analysis.
- Advanced to the CUMTA Innovation Challenge screening round.

Document Intelligence Retrieval System (RAG) | Gemini API, ChromaDB, Python

- Built a semantic search pipeline over PDF, DOCX and TXT files using the Gemini API and ChromaDB.
- Used EDA on the text data to decide chunking strategy, which improved retrieval accuracy.

CERTIFICATIONS

- Python for Data Science — NPTEL
- Machine Learning — Infosys Springboard
- Object-Oriented Programming in Python — Infosys Springboard
- Basics of Python — Infosys Springboard
- Oracle Cloud Infrastructure 2025
