PROFESSIONAL SUMMARY

Data Science and Analytics graduate with hands-on experience in SQL, Python, and dashboarding tools including Power BI and Tableau. Experienced in cleaning, organizing, and analyzing data to build dashboards and reports, track KPIs, and identify trends that support data-driven business decisions. Comfortable working with both structured and unstructured datasets, with a strong interest in growing further in data analytics and visualization on the job.

EDUCATION

B.Sc. (Computer Science - Data Science and Analytics) | (2023 – 2026)

Manikam Ramaswami College of Arts and Science

Key Subjects: Python, Machine Learning, SQL, Statistics

TECHNICAL SKILLS

Programming: Python, SQL,R, C, JavaScript

Data Analysis: SQL Querying, Statistical Analysis, EDA, Data Cleaning, Data Modeling, Pandas, NumPy

Data Visualization: Power BI, Tableau, Advanced Excel(PivotTables, VLOOKUP), Google Sheets

Machine Learning: Scikit-learn, NLP, YOLOv8, RAG

Databases: MySQL, ChromaDB

Tools: Git, GitHub, Google Colab, VS Code

Web & UI: HTML, CSS, Responsive Design, Figma

INTERNSHIP EXPERIENCE

Social Research Intern — EKTA Resource Centre for Women

- Supported a community safety initiative by conducting on-ground public safety audits and surveys at Arapalayam bus stand, gathering firsthand input from commuters and vendors, and analyzing field data to produce structured reports that informed community safety recommendations.

Web Development Intern — V7 Lancers (2 Months)

- Delivered a 13-section responsive college website (courses, events, faculty info) over a 2-month engagement, by building and organizing HTML/CSS layouts collaboratively to meet client requirements.
- Improved page accessibility and layout consistency across sections by iterating on UI structure with the development team.

PROJECTS

Smart Parking & Predictive Allocation Platform | Python, Data Analytics

- Modeled real-time occupancy data to build an automated parking availability tracking system and dynamic pricing algorithm, with reporting output to track usage trends.
- Applied predictive logic to analyze peak-hour usage patterns and optimize parking spot allocations by 25%, presenting findings through structured data summaries for decision-making.

Document Intelligence Retrieval System (RAG) | Gemini API, ChromaDB, Python

- Engineered an end-to-end vector search pipeline across PDF, DOCX, and TXT datasets using Google Gemini API and ChromaDB.
- Implemented cosine-similarity semantic search to optimize document retrieval precision and significantly minimize response hallucinations.
- Performed exploratory data analysis on unstructured text to inform the chunking strategy and improve retrieval accuracy.

AI-Based Traffic Monitoring & Analytics System | YOLOv8, OCR, Python

- Applied a pre-trained YOLOv8 model to build an automated traffic analysis pipeline, detecting and flagging vehicle violations using real-time data provided by CUMTA.
- Processed and structured CUMTA's traffic video feed data for vehicle classification and helmet compliance checks, advancing to the CUMTA Innovation Challenge screening round.
- Converted unstructured CUMTA video data into structured incident reports, enabling trend analysis and reporting on violation patterns.

Educational Platform & Information Portal

- Designed and structured a multi-section web application serving 13+ modules (course catalogs, event schedules, faculty directories).
- Conducted user requirements analysis and information architecture planning to streamline site navigation and content delivery.

CERTIFICATIONS

- Python for Data Science — NPTEL
- Object-Oriented Programming in Python — Infosys Springboard
- Basics of Python — Infosys Springboard
- Oracle Cloud Infrastructure 2025
- Machine Learning — Infosys Springboard
